

Customized, configurable, complete assemblies

ProConnex® Flow Paths from Repligen are customized, configurable and complete single-use assemblies that are pre-assembled to optimize connectivity with industry standard filtration technology and workflow. Scalable from 5 mL to 2000 L working volumes, the self-contained design of ProConnex® Flow Paths reduce implementation time, are Gamma-irradiated to lower the risk of contamination and built to meet the demands of customer specific filtration applications.

- Customizable flow paths defined through engineering design process
- Integrated with Spectrum® Hollow Fiber or TangenX™ Flat Sheet Cassettes
- Configurable connectivity
- Gamma-irradiated, sterile, ready-to-operate simplicity
- Fit for upstream or downstream processing
- Operates off-line with peristaltic pump or integrated magnetic levitating pump
- Manufactured in compliance with ISO guidelines in an ISO 7 clean room
